Subject: PICUP Workshop in May

Hello Alma, Derrick and Seamus,

In just under a month the PICUP Workshop will be underway. The four of us are working in *Group 2 – small introductory course, typically for majors*. Our group consists of:

Alma Zook, Pomona College

azook@pomona.edu

Marty Johnston, University of St. Thomas

mejohnton@stthomas.edu

Derrick Hylton, Spelman College

dhylton@spelman.edu

Seamus Lagan, Whittier College

slagan@whittier.edu

If you have not had a chance, take a look at the workshop website, <http://compphysed.shodor.org>. We have been charged with the development of a framework for teaching computational techniques in the context of electromagnetism in the introductory course. Over the next week or so think about what problems and issues we should focus on and share them with the group. Based on our discussion, I will assemble a preliminary agenda. However, like most creative endeavors it will morph and change in the ensuing days. I am looking forward to meeting and working with you in May.
